

General Bookstore Project, January 22nd, 2103 October 26th, 2012

Penguistics: Kernan "Kubby" Bagley III and John Zamberlan

Problem Definition

- Statement
 - The bookstore would like a digital version of the calendar system used to compare sales from month-to-month and week-to-week.
- Scope
 - Will prototype in command-line UNIX-like environment, and will add GUI later.
- Schedule
 - January 30th: Work on Data implementation.
 - February 1st: Re-brief with Bookstore
 - February 7th: Go over prototype.
- Resources
 - CTEC account
 - Ubuntu box at home
 - Graph paper
 - Math Skill

Potential Applications

- Helping any bookstore
- New office solutions
- Organization solutions

Solution Specifications

- We will create a prototypical calendar sales-tracking program to their needs. Since they have said they do not need anything fancy we can work on a graphical user interface later.

Competitive Analysis

- Competitors Pro
 - Have already deployed their solutions
 - Clients can usually customize themselves
 - Have better access to resources
 - Products work effectively
- Competitors Con
 - Solution may not be as personalized
 - May not be as targeted at a problem as an individual solution.

Future Improvement Ideas

- Be clearer on what service I can provide.
- Discuss project earlier.
